Vendor Quality Self Audit

Quality Control System:

- Quality Control procedures manual
- Company structure organized that the inspection function is separated from the maintenance/repair/overhaul function
- Receiving inspection procedures in place to assure received materials and products meet purchase requirements
- Written work instructions/procedures for all specific tasks
- Material certifications maintained on file
- Documented policy to control items with shelf-life
- Identities of material and products maintained through all operations
- System to ensure that current OEM/customer technical data is used for all pertinent operations
- Quality Control involved in work in progress, inspections as well as monitoring of tests
- Precision measuring precision equipment identified with a tracking number and its calibration status
- Written procedures in use for calibration of all precision measuring equipment (including personal tools) used for assembly and inspection purposes
- Record system that verifies adherence to established calibration schedules
- System for identification and handling of rejected parts by means of tags, forms and segregation
- Records processing, inspection, and tests maintained on file
- Training Program
